Bright Coffee Shop - Sales Analysis & Growth Opportunities

By: Koketso Mashilo

Revenue contribution by Store Location

3 Locations | \$698 812.33 Revenue

Key Insights

- Nearly equal contribution across all three locations
- Hell's Kitchen leads slightly with 34% (\$236 511.17)
- Astoria and Lower Manhattan both at 33%
- Revenue is well diversified – no single location dominates
- Consistent performance supports balanced growth strategy

Revenue by Store Location

Which Product Type Generated the Most Revenue?

29 Product Types | \$698 812.33 Revenue

Key Insights

- **Highly concentrated revenue:** the top 4 products generated a large share of total sales.
- **Long tail:** many product types contribute very little individually.
- **Drinks dominate:** Barista Espresso, Brewed Chai tea, Hot Chocolate, and various brewed coffee/tea are the clear revenue drivers.
- **Food items:** (scones, pastries, biscotti) sit in the middle.
- **Non-beverage items:** (clothing, housewares, most packaged beans) are at the bottom.

Which Product Categories Sell the Most?

214 470 Quantity | 9 Product Categories

Key Insights

- **Coffee dominate:** with 89.3k units sold – by far the top category.
- **Tea** is a strong second at 69.7K.
- Together, Coffee and Tea account for the vast majority of quantity sold.
- **Bakery** (23.2K) and **Drinking Chocolate** (17.5K) form the next tier.
- Lower volume categories (Coffee beans, Loose Tea, Branded, Packaged Chocolate) contribute relatively little.

When Does the Coffee Shop Generate Most Revenue?

Revenue peak by Hour of Day Analysis

Key Insights

- **Peak hour:** 10 AM is the **strongest**, generating \$88 673.39.
- **Morning rush:** Sharp climb from 6 AM to 8-10 AM (classic coffee shop morning peak).
- **Midday drop:** revenue falls sharply after 10 AM and stabilizes around \$40K from 12 PM to 5 PM.
- **Evening decline:** steady **drop** after 5 PM, ending the day near \$8K-10K.
- **Operational takeaway:** staffing and inventory should be heaviest between 7-11 AM. Afternoon is more stable but lower volume.

How Revenue and Transactions Change Throughout the day?

Sales Contribution across daily Time Intervals

Key Insights

- Strongest period - 09:00-12:00 (30:9% of all transactions)
- Morning block is the second largest – 06:00-09:00.
- Midday and afternoon periods are relatively even (17-18%).
- A sharp drop is seen in the evening between 18:00- 21:00 with only 9.5% of the total transactions.

Peak Transaction Periods - 3 Hour Intervals

Key Insights

- **Lower Manhattan** is strongest in the morning by over 90% of its revenue.
- **Hell's Kitchen** has the most balanced day, but still peaks strongly in the morning(24.5%)
- **Astoria** shows the healthiest afternoon performance (30.85%), making it less dependant on morning rush.

Total Quantity Sold By Product Type

Conclusion

Summary & Conclusion

Bright Coffee Shop is doing really well overall, bringing in almost \$700K in total revenue across our three locations. What's great is that all three stores—Hell's Kitchen, Astoria, and Lower Manhattan—are performing equally well, each pulling in about a third of our total sales.

However, looking closely at the data, we have two big bottlenecks holding back our growth:

We rely almost entirely on the morning rush. Sales peak sharply around 10 AM and drop off significantly for the rest of the day. Lower Manhattan is the most extreme example, making nearly 94% of its money in the morning alone.

Our weekend sales are way lower than weekdays. We are losing more than half our transaction volume on weekends compared to our regular weekday commuter crowd.

Recommendations to Increase Revenue

1. Bring in More Customers During Afternoons & Evenings

Launch Afternoon Deals: Create "PMs Perk" combo specials (like pairing a cold drink with a pastry or biscotti) between 12 PM and 5 PM to get people back through the door after lunch.

Fix Lower Manhattan's Afternoon Drop-off: Since Lower Manhattan dies down after the morning rush, start offering lunch specials or office catering options for local business workers nearby.

2. Get Customers to Spend More Per Visit

Push Food Pairings: Train baristas to actively offer a scone or pastry whenever someone buys an espresso, chai, or coffee. Raising food sales alongside our top drinks is the easiest way to increase total transaction amounts.

Replace Slow Retail Items: Take slow-selling merchandise like clothing and housewares off the shelves and replace that space with easy grab-and-go snacks or pre-packaged treats that customers actually buy on the go.

3. Boost Weekend Foot Traffic

Run Weekend-Only Promos: Offer weekend brunch specials, family bundles, or double loyalty points on Saturdays and Sundays to attract leisure customers when commuters aren't around.

Use a Digital Loyalty App: Set up a simple rewards app that sends push notifications with special discounts during slow hours to turn one-time morning customers into regular afternoon buyers.
